Obstructive Sleep Apnea (OSA) is a serious problem affecting millions of people in the United States. More than 18 million Americans suffer from OSA, approximately the population of Florida. Ninety percent of people with congestive heart failure remain undiagnosed and untreated due to OSA. Twenty percent of all serious car crash injuries are associated with driver sleepiness, and 60-80% of obese people have sleep disordered breathing.

Growing Healthcare Costs

The average amount of healthcare costs for undiagnosed OSA patients over a 2-year period is $200,000, highlighting the significant financial burden of the condition.

Home Sleep Testing

Patients with a high probability of OSA are eligible for home sleep testing, which is approximately 1/4 the cost of a full polysomnography (PSG) in-lab test.
